MULCH MAT

CASE STUDY

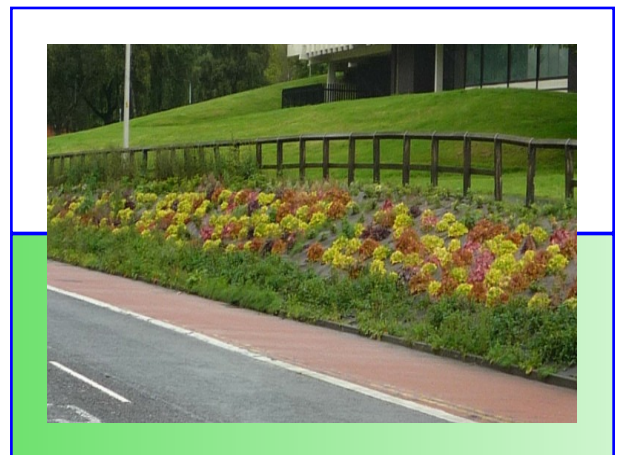

Urban Forestry - Blackburn, England
May 2012

For this project, Urban Forestry used 5000m² of our Ecotex Mulchmat in a built up area of Blackburn where heavy traffic passes through.

The low maintenance weed control membrane was applied to create moisture conservation in the planted areas by the side of the roads.

Ecotex Mulchmat is an effective, easy to use and economical solution with a number of environmental benefits. The material may look and feel like a conventional non-woven fabric, but is in fact made from plant sugars - also, it's 100% plastic free and fully biodegradable.

Urban Forestry were very pleased with the outcome that they sent us photos of the timeline of the project's development from start to finish.
