Summer Cut

## Brushwood Faggots

**Our Brushwood Faggots are for use in rivers, canals and lakes to trap sediment and protect the tow of the riverbanks.**

We use brushwood from sustainable sources.

Faggots/mattresses can be constructed from living or dead material and we supply our brushwood materials for many projects.

Brushwood faggots/mattresses are comprised of layers of faggots held by a grid of fixing posts and are very effective at trapping fine sediment. As such, brushwood faggots/mattresses are often used in inter-tidal or estuarine rivers.

Kindly note, depending on the season, our Brushwood Faggots will either be from a winter cut or summer cut. To confirm, predominantly the summer cut will still have leaves on, with the species typically being a mix of chestnut and birch.

### Features/Benefits:

- Always from sustainable sources
- Can be used in conjunction with our CoirLogs by supporting them at the correct height
- Helps protect banks from erosion

Feature	Brushwood Faggots
Material	Mix of Chestnut and Birch
Size	Approx 30cm diameter x 2.00m long
