# Eco-Peg™

Biodegradable Fixing Peg Stakes

Copyright protected. All rights reserved.

**100% Bio-Polymer | Fully Biodegradable | Environmentally Friendly**

**Eco-Peg™ is a new, fully biodegradable, fixing peg which takes advantage of the latest developments in biodegradable polymer technology to produce a landscape mat anchor peg with the highest environmental credentials.**

Over the past 20 years, increasing emphasis has been placed on living "green" and being environmentally conscious in the creation of industrial products and solutions. Throughout this time, there have been many different attempts, some misguided, aimed at creating the most environmentally friendly plastic products.

Eco-Peg™ contains a very special new additive, which intensifies the ability of plastics to biodegrade, in both aerobic and anaerobic environments, through the presence of micro-organism activity. Whether it is in compost, marine, landfill or soil environments the pegs fully break down within 5 years into CO<sub>2</sub>, biomass and water, returning to nature without leaving any harmful residues.

Eco-Peg™ is a genuinely biodegradable product and should not be confused with oxo-degradable plastics that just fragment into smaller pieces through exposure to sunlight resulting in harmful micro-plastics rather than breaking down at the molecular or polymer level like biodegradable and compostable plastics. The resulting micro-plastics are left in the environment indefinitely until they eventually fully break down.

Eco-Peg™ is made in the UK using a unique bio-polymer compound which contains 90% recycled consumer plastics enhanced with 1% of special additive.

The factory uses efficient production techniques that result in near zero waste and have invested in a vast solar panel system that powers their machines, factory and office space, to significantly reduce their carbon footprint.

Feature	Eco-Peg™
Size	150mm long, serrated edge
Product Code	MMP2B
Pieces per pack	1,000no
Barbs	2 Sides
Colour	Brown

Application Categories: Horticulture, Agriculture and Equestrian
